

## OFTen Suite packages for Ninja Trader

Two OFTen Suite packages are now available for Ninja Trader:

- OFTen Suite 1 – containing five indicators
- OFTen Suite Plus – containing 19 indicators and one new bar type.

### Package Contents

#### OFTen Suite 1

- **Buying Exhaustion** this indicator looks for patterns in bid/ask volumes on three adjacent price levels, close to the high of the bar, in order to identify weakness in buying activity.
- **Selling Exhaustion** this indicator looks for patterns in bid/ask volumes on three adjacent price levels, close to the low of the bar, in order to identify weakness in selling activity.
- **Absorption Zones** –identifies absorption that occurs near the bar High/low.
- **Pressure Line -** – this indicator is used to identify volume divergence based on shifts in buying and selling pressure as the market moves through auction cycles.
- **Voltic** – shows where the speed of trading increases substantially, indicating the presence of institutional activity, and indicates whether the increased activity is on the bid or the ask.

#### OFTen Suite Plus

- **Auction Bars** : a Bar Type similar to Reversal Bars, but with an improved mapping of directional moves and reversals.
- **Block Trades** – shows the number and size of block trades at each price level on a bar, which help to identify key levels of institutional activity.
- **Book Ratio** – displays book ratio values that can be used to identify exhaustion and stopping volume levels
- **Cumulative Delta** – displays delta on a cumulative basis, either by session or across multiple sessions. Delta can be calculated either using Ask-Bid or Up/Down Tick Volume.
- **Draw Value Line** – plots a value line based on inputs from two instruments.
- **Failed Auction / Level 2 Buyers and Sellers** – identifies buyer and seller auctions that have failed to retest top or bottom edges, and the appearance of level 2 buyers and sellers.
- **Full VZscore** – based on the standard Zscore indicator, it uses a volume Zscore to refine the price Zscore and give a better quality signal.
- **Market Maker Model** – identifies delta divergence that indicate changes in Market Maker bias.
- **Market Maker Reversal** – uses a combination of price action patterns and volume to identify market maker activity prior to a possible reversal.
- **Measured Move** – the indicator monitors price action to identify minor and major institutional price levels and plot the rolling 50 levels. These levels can be used to identify potential targets in measured price moves and will often serve as important support/resistance levels.
- **Price Rejection** – identifies price levels at which buyers or sellers attempted to move price beyond those levels but failed to carry it through

- [Stacked Imbalances](#) – identifies zones where buying or selling imbalances are found on a number of consecutive price levels.
- [Stopping Volume](#) – the indicator highlights where high volume arrives to halt the current price movement.
- [Stop Run](#) – identifies price levels within a bar at which a zero bid or ask volume indicates a rapid move through those levels typically seen in a stop run.
- [Time Segmented Volume](#) – segments a market’s price and volume according to time intervals. The price and volume data are then compared to identify periods of accumulation (buying) and distribution (selling).
- [Volume Nodes](#) – this indicator identifies high volume price clusters within a bar and uses the placement of HVNs and POC on the bar to identify responsive buying/selling and initiated buying/selling.
- [Volume Reversal](#) - uses price action and volume to identify a chart pattern that signals an imminent reversal.
- [Volume Triggers](#) identifies signals for shakeouts, traps, end of trend, and supply and demand bars that help to build a picture of current market activity.
- [VPIN](#) – identifies the presence of toxic order flow, which will help to determine the probable reaction of the Market Maker and, in consequence, the likely direction of the market.

## Pricing

### Existing Sierra Chart OFten users

Existing OFten Suite users on Sierra Chart who wish to move to Ninja Trader can opt to deactivate their OFten access on Sierra Chart. In this case, they will receive OFten Suite 1 free of charge. Users who wish to retain OFten on Sierra Chart may purchase the Ninja Trader package versions at the prices for New Users as described below.

### New Users

Prices for each package are as follows:

#### **OFten Suite 1 : \$100**

This is a one-time payment. The package includes the OFten Suite 1 indicators as listed above, User Guide, ongoing support and User Group membership.

#### **OFten Suite Plus : \$197**

This is a one-time payment. The package includes the OFten Suite Plus indicators as listed above, User Guide, ongoing support and User Group membership.
